

The Pointe at 53rd Shopping Center

Retail Complex, Sandy, UT

Project Overview

Designed as an eccentric brace frame, the owner realized that some of the braces would be visible. Because of the maximum structural survivability and aesthetics, Star Seismic Buckling Restrained Braces with pinned connections were chosen.

Working hand-in-hand with the project engineer, Star Seismic helped with the Buckling Restrained Brace design to receive approval from building officials. With an expedited schedule, Star Seismic detailed, procured material, fabricated and delivered the braces in under 8 weeks.
